What is CAS 868844-74-0 Acetyl Octapeptide-3 Peptide?

Acetyl Octapeptide-3 Peptide, also known as SNAP-8, is a synthetic peptide that is used in cosmetics to reduce the appearance of wrinkles and fine lines. It is similar to the naturally occurring peptide acetyl hexapeptide-3, which is a known muscle relaxant.

Acetyl Octapeptide-3 Peptide works by blocking the release of acetylcholine, a neurotransmitter that is responsible for muscle contraction. When the muscles are relaxed, the skin appears smoother and less wrinkled.

Acetyl Octapeptide-3 Peptide is generally considered to be safe and well-tolerated. However, some people may experience skin irritation, redness, or itching. It is important to avoid using Acetyl Octapeptide-3 Peptide if you are pregnant or breastfeeding.

Acetyl Octapeptide-3 Peptide is typically used in concentrations of 0.1-1% in skincare products. It can be found in a variety of products, including serums, creams, and masks.

Benefits of using Acetyl Octapeptide-3 Peptide

- Reduces the appearance of wrinkles and fine lines
- Improves skin texture
- Smooths the skin
- Brightens the complexion
- Reduces the appearance of dark circles and puffiness under the eyes
- Improves skin elasticity

If you are looking for a way to reduce the appearance of wrinkles and fine lines, Acetyl Octapeptide-3 Peptide is a good option to consider. It is a safe and effective ingredient that can be found in a variety of skincare products.

Here are some examples of skincare products that contain Acetyl Octapeptide-3 Peptide :

- Innisfree The Green Tea Seed Serum
- The Ordinary Argireline Solution 10%
